

PORTFOLIO BUILDING B25CS0311

ACTIVITY 14: HACKATHON PREPARATION

Name: Trivikram Kalagi | SRN: _____

1. Team Formation

Member	Role	Primary Contribution
Trivikram Kalagi	Team Leader — Core Backend / Building	Core product architecture, backend/core implementation, integration and technical execution.
Suhas Hannamannavar	Frontend & Design	Frontend implementation, interface design and product presentation.

2. Selected Hackathon

Event: YC Fall 2026 × Moss: The Zero-Latency Builder Sprint
Event page: <https://app.hidevs.xyz/hackathons/yc-fall-2026-moss-zero-latency-builder-sprint>
Track: Track 4 — Agent Reliability, Security & Evaluation
Outcome: Team Litigo secured 3rd place and received a ₹9,500 cash prize. The certificate recognizes Trivikram Kalagi for 3rd place and notes exceptional creativity, technical excellence, innovation and execution.

3. Brainstormed Problem Ideas — Feasibility vs Impact

Idea	Direction	Feasibility	Impact
1. Universal AI Policy Guardrail	Browser layer for user-defined AI rules across major assistants.	High	High
2. Local AI Truth & Compliance Layer	Privacy-first local checking against user-provided knowledge.	Medium-High	High
3. Real-Time AI Voice Safety Evaluator	Low-latency policy and safety evaluation for live AI voice streams.	Medium	High

Selected idea: Universal AI Policy Guardrail, expanded into Litigo by combining real-time policy enforcement, local truth verification and voice-agent safety evaluation. It offered the strongest balance of feasibility and impact within the hackathon scope.

4. Problem Statement

AI adoption is growing rapidly, but users and organizations have limited control over how AI systems follow privacy, policy and compliance requirements. Rules such as forbidden topics, response-length limits, required formats and factual verification are difficult to enforce consistently across different AI platforms. Litigo addresses this by providing a zero-latency, privacy-first AI policy and compliance engine that runs locally inside the browser using WebAssembly (WASM). It intercepts and evaluates interactions across major AI assistants, applies user-defined rules in real time, highlights violations and produces a live Trust Compliance Score without sending user data to an external server.

5. Target Users

All people who use AI, particularly individual users, developers, teams and organizations that need stronger control over AI behaviour, privacy and policy compliance.

6. Planned / Implemented Tech Stack

Component	Technology / Implementation
Browser / Extension	Chrome Extension, Manifest V3, Browser DOM
Core Engine	WebAssembly (Moss WASM), 128-dimensional vector cosine similarity
Frontend / Portal	Next.js 14, App Router
Voice Evaluation	LiveKit / livekit-client
Local Storage & Security	IndexedDB with AES-256-GCM via WebCrypto
Truth / Knowledge Layer	Local document parsing, chunking, vector indexing and verification
Supported AI Platforms	ChatGPT, Claude, Gemini, Grok, Perplexity, DeepSeek
Deployment / Demo	Vercel

7. Project Evidence

GitHub repository: <https://github.com/trivikramkalagi91-commits/Litigo>
The repository documents the Litigo architecture, Moss WASM engine, LiveKit voice evaluator, Next.js portal, AES-256-GCM local security, supported AI platforms, development commands and performance targets. The project was built for the YC Fall 2026 × Moss: The Zero Latency Builder Sprint.

ACTIVITY 14 — SUPPORTING EVIDENCE

YC Fall 2026 × Moss: The Zero-Latency Builder Sprint — 3rd Place

Certificate No:
HiDevs/Moss/2026/09/W004

Certificate of Achievement

This is to proudly certify that

Trivikram Kalagi

has secured **3rd Place** in
YC Fall 2026 × Moss: The Zero-Latency Builder Sprint,
organized by **AI House × HiDevs**.

The participant demonstrated exceptional creativity, technical excellence, innovation, and execution in building a solution leveraging Moss and stood among the top builders of the Zero-Latency Builder Sprint.

We proudly recognize their **outstanding achievement, dedication, and contribution to the builder community**.

Their participation reflects the vision of building the next generation of 10M+ Generative AI Developers by 2030.
