

Activity 11 / Activity 7 — Instagram Branding & Coding Platforms

Submission & Evidence Document

Course: Portfolio Building (B25CS0311) | B.Tech CSE, REVA University

Name: Trivikram Kalagi

GitHub: trivikramkalagi91-commits

Instagram Handle: @trivikram_ai (confirmed)

Email: trivikramkalagi91@gmail.com

1. Activity Summary

Completed Instagram branding for tech: set up the profile bio to document my developer journey, designed one coding-milestone Story/Post using a Canva template and published it, followed three developer-community / tech-creator accounts, and saved the published Story to a dedicated 'Dev Journey' highlight on my profile. Account is set to Public so the evaluator can view the post and highlight.

2. Evidence 1 — Published Story / Post (Canva template)

Caption / post text (example):

"Shipped my personal portfolio — built with Next.js, styled neo-brutalist with neon lime, live on Vercel. #100DaysOfCode #BuildInPublic"

Published Story (Canva-template design) saved in the 'Dev Journey' highlight — '3rd Prize at YC Fall 2026 × Moss, Litigo, ₹9,500'.

3. Evidence 2 — 'Dev Journey' Highlight (confirmed)

Highlight name: Dev Journey () · Visible on profile, contains the saved Canva-template Story.

Instagram profile @trivikram_ai — bio set, 'Dev Journey' highlight visible, 33 accounts followed.

4. Evidence 3 — 3 Tech Creators / Community Accounts Followed

#	Instagram handle	Why followed (community / events / tips)
1	@gdgindia — Google Developer Group India	Developer community — events, workshops, tech talks across India
2	@hack2skill — Hack2skill	Hackathon & student-

	(verified)	developer organizer — competitions and opportunities
3	@krishnaik06 — Krish Naik (verified)	AI/ML educator & tech creator — tutorials, career guidance, build-in-public

Confirmed: 33 accounts followed, including the three tech/community accounts above (plus @underratedcoder, @googlelegeminiindia, @googleindia, @_logiconboard_).

Following list (33) showing tech/community accounts followed.

5. Evidence 4 — Account Visibility (Public)

Confirm account is Public (Settings → Privacy → Account privacy = Public), so the evaluator can view the post and 'Dev Journey' highlight without a follow request.

Confirmed Public — profile and highlights viewable without a follow request (see profile screenshot in Evidence 2).

6. Deliverable Checklist

Screenshot of published Story/Post using a Canva template — included (Evidence 1)

Screenshot of 'Dev Journey' highlight with at least 1 saved item — included (Evidence 2)

3 tech creators / developer-community accounts followed — listed + screenshot (Evidence 3)

Account visible to evaluator — Public, confirmed (Evidence 4)

7. Reflection

Designing the post in Canva taught me to keep visual updates simple — one headline, one supporting line, and a hashtag. Saving it to a dedicated 'Dev Journey' highlight turns an ephemeral Story into permanent evidence of progress. Following local dev-community accounts surfaced real event and hackathon opportunities I would otherwise have missed.
